Amendments to the Claims:

This listing of claims will replace all prior versions, and listing of claims in the application:

Listing of the Claims:

- 1. (Currently Amended) A method for controlling exchange of private information associated with a client device, said method comprising:
 - (a) receiving a request from the client device;
- (b) determining whether a privacy agreement is needed to respond to the request before private information associated with said client device is exchanged;
- (c<u>1</u>) negotiating a privacy agreement before private information associated with said client device is exchanged, wherein the privacy agreement <u>includes a plurality of components and governs</u> the exchange of the private information when said determining (b) determines that a privacy agreement is needed;
- (c2) determining whether a privacy agreement should be accepted by examining at least one proposed privacy agreement which includes a plurality of components that govern the exchange of privacy information associated with said client;
- (c3) negotiating at least one component of said at least one proposed privacy agreement when said determining (c2) determines that a privacy agreement should not be accepted;
- (c4) generating an accepted privacy agreement as a set of rules that govern the exchange of private information when said determining (c2) determines that a privacy agreement should be accepted; and
- (d) thereafter producing a response to the request when said determining determines that a privacy agreement can be accepted.

Atty. Docket No.: UWP1P026/UP-1091 Page 2 of 21 Serial No.: 09/559,230

- 2. (Original) A method as recited in claim 1, wherein the private information includes location information of the client device.
- (Original) A method as recited in claim 1, wherein said producing (d) comprises:
 (d1) receiving the private information associated with the client device; and
 (d2) producing the response to the request based at least in part on the private information.
- 4. (Original) A method as recited in claim 3, wherein the private information includes location information of the client device.
- 5. (Original) A method as recited in claim 4, wherein the client device is associated with a network, and

wherein the location information is at least one of client-provided and networkprovided.

- 6. (Original) A method as recited in claim 3, wherein said method is performed on a server.
- 7. (Original) A method as recited in claim 6, wherein the private information is attached to the request.
- 8. (Original) A method as recited in claim 1, wherein the client device is a wireless device.
- **9.** (Currently Amended) A method for exchanging private information associated with a client device to a server device via a proxy server, said method comprising:

Atty. Docket No.: UWP1P026/UP-1091 Page 3 of 21 Serial No.: 09/559,230

establishing an authorization agreement that enables the proxy server to negotiate privacy agreements with server devices on behalf of the client device, wherein the privacy agreement defines a set of rules that govern the exchange of information between the client device and the server device;

receiving a request at the proxy server;

receiving a proposed privacy agreement from the server device associated with the request;

negotiating the privacy agreement by the proxy server on behalf of the client device when not in accord with the authorization agreement;

accepting the proposed privacy agreement as a privacy agreement by the proxy server for the client device when in accord with the authorization agreement; and

providing the private information to the server device after <u>said accepting</u> establishment of the privacy agreement.

10. (Currently Amended) A method as recited in claim 9,

wherein said method further comprises:

negotiating the privacy agreement by the proxy server for the client device when not in accord with the authorization agreement, and

wherein said providing the private information to the server device is performed after said accepting of the proposed privacy agreement as the privacy agreement or after said negotiating of the privacy agreement.

- 11. (Original) A method as recited in claim 9, wherein the private information includes location information of the client device.
- 12. (Original) A method as recited in claim 11, wherein the client device is associated with a network, and

wherein the location information is at least one of client-provided and network-provided.

Atty. Docket No.: UWP1P026/UP-1091 Page 4 of 21 Serial No.: 09/559,230

- 13. (Original) A method as recited in claim 11, wherein the request is received at the proxy server and the response is produced by the server device.
- 14. (Original) A method as recited in claim 13, wherein the request includes the private information associated with the client device.
- 15. (Original) A method as recited in claim 14, wherein said providing operates to provide the private information to the server device after said accepting of the proposed privacy agreement as the privacy agreement or after said negotiating of the privacy agreement.
- 16. (Original) A method as recited in claim 15, wherein said providing operates to refuse to provide the private information to the server device when both the proposed privacy agreement is not accepted and negotiating of the privacy agreement is unsuccessful.
- 17. (Original) A method as recited in claim 9, wherein said method further comprises:

determining whether an existing privacy agreement already exists for the server device and the client device; and

bypassing said receiving of the proposed privacy agreement and said accepting of the proposed privacy agreement when said determining operates to determine that an existing privacy agreement already exists for the server device and the client device.

18. (Original) A method as recited in claim 17, wherein said determining of an existing privacy agreement already exists comprises:

identifying an existing agreement between the server device and the client device, the existing agreement having a predetermined coverage; and

determining whether the request is covered by the predetermined coverage of the identified existing agreement.

- **19.** (Currently Amended) A method for controlling exchange of private information associated with a client device supported by a carrier network infrastructure, said method comprising:
- (a) receiving a request from the client device, the request being directed to a server device;
- (b) determining whether a privacy agreement is needed to respond to the request;
- (b1) negotiating a privacy agreement that governs the exchange of the private information when said determining (b) determines that a privacy agreement is needed ,wherein said negotiating comprises:

determining whether a privacy agreement can be reached by examining at least one proposed privacy agreement which includes a plurality of components which define a set of rules governing the exchange of private information;

negotiating at least one component of said at least one proposed privacy agreement when said determining determines that a privacy agreement should not be accepted;

- (b2) generating an accepted privacy agreement as a document when said determining determines that a privacy agreement can be accepted, wherein said document includes one or more components that define the accepted privacy agreement;
- (c) determining, based on said <u>accepted</u> privacy agreement, whether the server device is authorized to receive the private information associated with the client device when said determining (b) determines that a <u>privacy</u> agreement is needed <u>a privacy</u> agreement can be reached; and
- (d) providing the private information to the server device associated with the request when said determining (c) determines that the server device is authorized to receive the private information associated with the client device.

Atty. Docket No.: UWP1P026/UP-1091 Page 6 of 21 Serial No.: 09/559,230

20. (Original) A method as recited in claim 19, wherein the client device is a wireless client device, and

wherein the private information includes location information of the client device.

- 21. (Original) A method as recited in claim 19, wherein said method further comprises:
 - (e) thereafter producing a response to the request at the server device.
- 22. (Original) A method as recited in claim 21, wherein said producing (e) comprises:
 - (e1) receiving the private information associated with the client device; and
- (e2) producing the response to the request based at least in part on the private information.
- 23. (Original) A method as recited in claim 22, wherein the private information includes location information of the client device.
- 24. (Original) A method as recited in claim 19, wherein the request includes a URL, and

wherein said determining (c) comprises:

- (c1) comparing the URL of the request with a list of authorized URLs; and
- (c2) determining that the server device is authorized to receive the private information associated with the client device when said comparing (c1) determines that the URL of the request is found within the list of authorized URLs.

Atty. Docket No.: UWP1P026/UP-1091 Page 7 of 21 Serial No.: 09/559,230

25. (Currently Amended) A system for controlling information exchange between a wireless client device and server devices, the wireless client device being supported by a wireless network, said system comprising:

a proxy server device operatively connected between the wireless client device and the server device, <u>wherein</u> said proxy server device manages distribution of private information associated with the wireless client device to the server devices, <u>and</u> <u>wherein</u> said proxy server device includes at least:

a storage area, said storage area stores information received from at least one of the wireless client device and from the wireless network; [[and]]

a privacy manager, said privacy manager operates to restrict the release of the information received from the wireless client device and the wireless network to the one or more of the server devices unless a suitable privacy agreement governing the use of the information is in place for the one or more server devices; and

wherein said privacy manager is capable of operating to:

determine whether said privacy agreement can be accepted by examining at least one proposed privacy agreement that includes a plurality of components which govern the exchange of privacy information associated with said client device;

negotiating at least one component of said at least one proposed privacy agreement when said determining determines that a privacy agreement should not be accepted; and

that govern the exchange of private information when said determining determines that a privacy agreement should be accepted.

26. (Original) A system as recited in claim 25, wherein the information received from at least one of the wireless client device and the wireless network comprises location information associated with the location of the wireless client device.

Atty. Docket No.: UWP1P026/UP-1091 Page 8 of 21 Serial No.: 09/559,230

27. (Original) A system as recited in claim 25,

wherein the information received from the wireless client device and the wireless network comprises location information associated with the location of the wireless client device, and

wherein said system further comprises:

a location manager, said location manager performs a reconciliation and/or canonicalization process on the location information received from the wireless client device and the wireless network to produce a determined location.

- 28. (Original) A system as recited in claim 27, wherein said privacy manager operates to restrict the release of the determined location to the one or more of the server devices unless a suitable privacy agreement governing the use of the determined location is in place for the one or more server devices.
- 29. (Original) A system as recited in claim 28, wherein the suitable privacy agreement is provided in a markup language.
- 30. (Original) A system as recited in claim 28, wherein said privacy manager can further negotiate with the one or more server devices to establish a suitable privacy agreement.
- 31. (Original) A system as recited in claim 25, wherein said privacy manager can further negotiate with the one or more server devices to establish a suitable privacy agreement.
- 32. (Original) A system as recited in claim 25, wherein the information received from at least one of the wireless client device and the wireless network comprises subscriber information associated with the subscriber of the wireless client device.

Atty. Docket No.: UWP1P026/UP-1091 Page 9 of 21 Serial No.: 09/559,230

33. (Original) A system as recited in claim 25, wherein the information includes private information and non-private information, and

wherein said privacy manager restricts access to the private information but not the non-private information.

34. (Currently Amended) A computer readable medium including computer program code for controlling exchange of private information associated with a client device, said computer readable medium comprising:

computer program code for receiving a request from the client device; and computer program code for negotiating a privacy agreement that governs the exchange of the private information, wherein said negotiating comprises:

determining whether a privacy agreement should be accepted by examining at least one proposed privacy agreement which includes a plurality of components that govern the exchange of privacy information associated with said client;

negotiating at least one component of said at least one proposed privacy agreement when said determining determines that a privacy agreement should not be accepted; and

generating an accepted privacy agreement as a set of rules that govern the exchange of private information when said determining determines that a privacy agreement can be accepted.

35. (Currently Amended) A computer readable medium including computer program code for exchanging private information associated with a client device to a server device via a proxy server, said computer readable medium comprising:

computer program code for establishing an authorization agreement that enables the proxy server to negotiate privacy agreements with server devices on behalf of the client device, wherein said privacy agreement governs the exchange of private information between said client device and said server devices;

computer program code for receiving a request at the proxy server;

Atty. Docket No.: UWP1P026/UP-1091 Page 10 of 21 Serial No.: 09/559,230

computer program code for receiving a proposed privacy agreement from the server device associated with the request;

computer program code for accepting the proposed privacy agreement as a privacy agreement by the proxy server for the client device when in accord with the authorization agreement; [[and]]

computer program code for providing the private information to the server device after establishment of the privacy agreement.

36. (Currently Amended) A computer readable medium including computer program code for controlling exchange of private information associated with a client device supported by a carrier network infrastructure, said computer readable medium comprising:

computer program code for receiving a request from the client device, the request being directed to a server device;

computer program code for determining whether a privacy agreement can be accepted by examining at least one proposed privacy agreement that governs that exchange of privacy information associated with said client device;

computer program code for negotiating the privacy agreement by the proxy server on behalf of the client device when not in accord with the authorization agreement;

computer program code for determining whether the server device is authorized to receive the private information associated with the client device; and

computer program code for providing the private information to the server device associated with the request when said determining determines whether the server device is authorized to receive the private information associated with the client device.

37. (Currently Amended) A method as recited in claim 1, wherein said accepted privacy agreement includes the following principle components: a PROP, an agreeID, a final, a propURI, a postURL, a realm, an entity, an assurance, an agrexp, and an optional principal component. said method further comprises:

Atty. Docket No.: UWP1P026/UP-1091 Page 11 of 21 Serial No.: 09/559,230

generating said privacy agreement; and

not exchanging private information which is not governed by said privacy agreement.

38. (Currently Amended) A method as recited in claim 1,

wherein said privacy agreement is negotiated in accordance with a Platform for Privacy Preferences (P3P) protocol, and

wherein said accepted privacy agreement includes one or more of the following principle components: a PROP, an agreeID, a final, a propURI, a postURL, a realm, an entity, an assurance, an agrexp, and an optional principal component.

39. (Previously Presented) A method as recited in claim 1, wherein said method further comprises:

providing an accepted privacy agreement in a markup language.

- 40. (Currently Amended) A method as recited in claim [[1]] 39, wherein said markup language can be XML, HTML, WML, and HDML.
- 41. (New) A method for controlling exchange of information between a plurality of entities, said method comprising:

presenting, by a first entity, a proposed agreement that governs the exchange of information with said first entity, wherein said proposed agreement includes a plurality of components that define a set of rules which govern said exchange of information;

evaluating, by a second entity, said proposed agreement, to determine whether said proposed agreement should be accepted;

determining whether at least one component of said proposed agreement can be negotiated, wherein said negotiating comprises:

defining said at least one component of said proposed agreement;

determining whether said defined component is acceptable; and redefining said at least one component when said determining determines that said defined component is not acceptable; and

accepting said at least one component of said proposed agreement when said determining determines that said at least one component of said proposed agreement can be negotiated.
